

Organic Sheep Milk Feed - Lactation

Prepared for the milk production and changing nutrient needs of ewes in lactation. It is aimed at supporting milk production, maintaining appropriate body condition and providing balanced nutrition throughout lactation.

Analytical constituents

PARAMETER	VALUE	UNIT
Crude protein	16.5–18.5	%
Metabolisable energy (ME)	2650–2800	kcal/kg
Crude fat	3–5.5	%
Crude fibre	10–14	%
Crude ash	7.5–9.5	%
Calcium (Ca)	0.8–1.1	%
Phosphorus (P)	0.4–0.55	%
Sodium (Na)	0.2–0.35	%

PRODUCT FORM
Mash compound feed

PACKAGING
25 kg PP bag · 50 kg PP bag · 25 kg kraft bag · 1,000 kg big bag · Bulk

ORIGIN

Balanced milk production throughout lactation

In ewes, the need for energy, protein, minerals and other nutrients increases with milk production from the first period of lactation. As milk yield and the animal's nutrient needs may change as lactation progresses, it is important to manage the feeding programme in line with the production period.

Bioyem Organic Sheep Milk Feed is an organic compound feed prepared for the nutritional needs of milking ewes between days 1 and 150 of lactation; as a concentrate, it does not replace roughage and is used together with roughage in the ration.

In this period, an adequate and balanced supply of energy and protein in particular, as well as fibre, minerals and

other nutrients, is important for supporting milk production as well as maintaining the animal's body condition.

Monitoring feed intake, milk yield and the animal's overall condition together throughout lactation helps run the feeding programme in line with the flock's needs.

PERIOD OF USE
Days 1–150 of lactation

TARGET ANIMAL
Milking ewes

PRODUCT TYPE
Organic compound feed

The parameters stated above represent generally accepted values and may vary by batch; binding values are communicated at the time of enquiry during the resulting discussions.
